Olusola Ajayi

Senior Full-Stack Engineer | Python, Go, TypeScript (React, Node.js, AWS) | Real-time Systems • Mapping • Microservices | Built Mining Analytics + FinTech Platform (1K+ users in 2 months)
Sault Ste. Marie, Ontario, Canada

Summary

I am a Senior Full-Stack Engineer specializing in building production-grade, end-to-end systems using TypeScript across frontend, backend, and cloud infrastructure. I have led the development of high-impact platforms from 0 → production, including:

- A multi-tenant fintech vending system (BuyPower) used by 1,000+ users within 2 months
- A real-time mining analytics platform with live geospatial tracking, equipment telemetry, and operational insights
- Offline-first mobile data systems designed for low-connectivity environments (e.g., underground mining)

My core strength is ownership — I don't just implement features, I design systems, challenge assumptions, and deliver scalable solutions under real-world constraints. Tech I work with: TypeScript, React, Node.js, Python, FastAPI, Django, Golang, AWS (Lambda, DynamoDB, Athena), PostgreSQL, MongoDB, GraphQL, WebSockets, CesiumJS## What I care about:

- System design & trade-offs
- Performance under real-world constraints
- Building resilient, scalable architectures
- Using AI to accelerate development workflows

Currently exploring LLM engineering and agentic systems, applying AI to real-world product problems. If you're building something technically challenging or high-impact, I'd love to connect.

Experience

ShareWord Global

10 months

Software Engineer

May 2026 - Present (3 months)

Software Developer

October 2025 - Present (10 months)

SYM.AI

Full-stack Developer

April 2023 - March 2026 (3 years)

Sudbury, ON

- Owned end-to-end development of features on a real-time mining analytics platform for monitoring heavy equipment, geospatial movement, and operational performance
- Designed and implemented live 3D mapping system using CesiumJS + React + TypeScript for tracking trucks/loaders in real time.
- Architected a resilient offline-first system to handle unreliable underground connectivity, reducing system downtime and improving data consistency
- Built scalable backend services for ingesting and analyzing telemetry data
- Delivered real-time insights on fuel usage, cycle times, and asset performance used for operational decision-making

Impact:

- Improved visibility into mining operations
- Reduced reliance on constant connectivity (critical constraint in underground environments)
- Enabled data-driven optimization of fleet performance

Podopolo

Senior Software Engineer

June 2021 - December 2022 (1 year 7 months)

United States

- Led migration from React.js to Next.js, improving performance, SEO, and application scalability
- Drove backend transition from MongoDB to PostgreSQL, improving data integrity and query performance
- Contributed to system architecture improvements across frontend and backend layers
- Collaborated in a distributed team to deliver production-grade features for a growing platform

- Demonstrated deep familiarity working with Node.js frameworks like Nest.js and Next.js, Go, SQL and NoSQL databases, particularly MongoDB & PostgreSQL, AWS, and developing REST APIs.

The Fitting Room

Full Stack Engineer

November 2020 - July 2021 (9 months)

Toronto, ON

- Built features for an AI-powered e-commerce platform enabling real-time customization of clothing (measurements, materials, tailoring preferences)
- Responsible for building the storefront with JavaScript ES6+, React, Microservices, three.js, and API integrations.
- Built solutions with TypeScript, Node.js, MongoDB, feathers.js, Reaction Commerce, React Admin, React Native, Docker, and Kubernetes amongst other technologies

BuyPower Inc.

Senior Software Engineer

March 2020 - December 2020 (10 months)

Abuja

- Sole full-stack engineer responsible for building a multi-tenant utility vending platform (electricity/water token system) from scratch
- Delivered MVP in ~3 months, onboarding 3,000+ users within 2 months of launch
- Designed backend systems for billing, token generation, debt tracking, and financial reconciliation
- Implemented concurrency-safe transaction handling to prevent race conditions in token issuance
- Built reporting and notification systems for operational and financial insights
- Deployed infrastructure using AWS EC2, Docker, Nginx, and PM2

Impact:

Enabled scalable digital utility payments
Reduced transaction errors through improved system design
Supported rapid early-stage growth

Andela

10 months

Product Owner

July 2019 - September 2019 (3 months)

Lagos

I managed two teams of eight full-stack developers each. The teams were worked on two different products.

I helped mentor the developers and ensured quality delivery of outputs.

The teams ran on a one-week Agile sprint. I assigned and set expectations as well as leading scrum ceremonies

Skills used: Pivotal Tracker Board, Git, Zoom, Slack, Figma, and soft skills

Product Engineer

July 2019 - September 2019 (3 months)

Lagos, Nigeria

I worked as a full-stack Product Engineer on the company's travel app.

I was among the initial set of developers that began working on initiatives for the product's version two.

Skills used: JavaScript, NodeJs, ReactJs, ExpressJs, PostgreSQL, Sequelize, Mocha, Cypress, Jest, Pivotal Tracker Board, and Jira.

Software Developer

December 2018 - September 2019 (10 months)

Lagos

I worked as a full-stack developer on Agile teams that developed and maintained products.

Skills used: JavaScript, NodeJs, ReactJs, ExpressJs, PostgreSQL, Sequelize, Mocha, Cypress, Jest, Figma, Pivotal Tracker Board, and Jira.

Software Developer

March 2019 - June 2019 (4 months)

Lagos

I worked as a Full-stack developer on the company's travel app.

I was part of the product's first launch and contributed to stabilizing version one.

Skills used: JavaScript, NodeJs, ReactJs, ExpressJs, PostgreSQL Sequelize, Mocha, Cypress, Jest, Pivotal Tracker Board, and Jira.

EppMe Digital Technologies Limited

Software Developer

March 2017 - December 2018 (1 year 10 months)

Lagos, Nigeria

I maintained an Elections Result Monitoring App developed with CakePHP. I interfaced with rural dwellers and political party agents who needed to use the app during elections.

Skills used: PHP, HTML, CSS, soft skills.

RCCG Dominion Sanctuary ACME

5 years 8 months

Web and Social Media Manager

April 2016 - January 2018 (1 year 10 months)

ACME Road, Ikeja

Website Design and Development

Social Media Management

Content Development for Social Media

Video Editing and creation

Skills used: PHP, HTML, JavaScript CSS, Adobe Premiere Pro, soft skills.

Sound Engineer

June 2012 - April 2016 (3 years 11 months)

Audio and Visuals,

Ebzeal Solutions

Software Engineer

July 2011 - May 2016 (4 years 11 months)

Ikeja

Website design

Web App Development

Database Management

Fullstack developer role

Skills Used: JavaScript, PHP, PostgreSQL, MongoDB, MySQL and Firebase, Sequelize, Mongoose, ReactJs, Angular, Laravel, Symfony, TypeScript Apollo GraphQL, nextJs, Twitter Bootstrap, Semantic UI, Materialize CSS, HTML & CSS, Git, Mocha, Jest, Cypress, Figma.

Placid Properties Limited

IT officer

June 2008 - June 2011 (3 years 1 month)

Lagos, Nigeria

Database Set up,

Client Information and payment updates on the web portal

Web Portal Development and Maintenance

Basic office technical repairs

Website Design

Software Development and Database Management.

Skills used: PHP, HTML, JavaScript CSS, Visual Basic, MYSQL.

Education

Algoma University

Bachelor's degree, Computer Science · (January 2023 - June 2025)

Osun State Polytechnic Iree

National Diploma, Electrical Electronics Engineering · (2005 - 2007)

Zero To Mastery Academy

Computer Software Engineering
